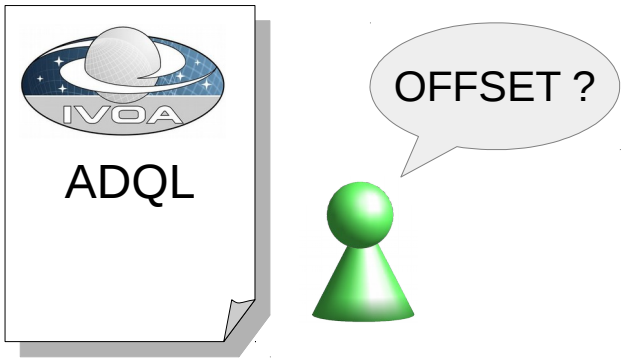
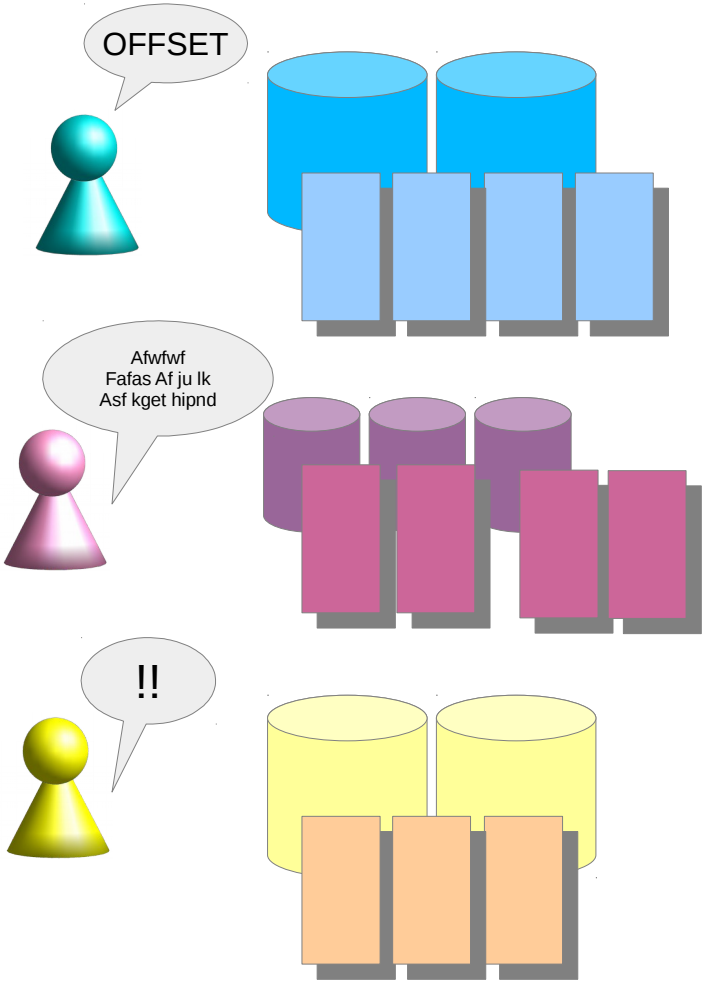
Initial proposal and
group discussion



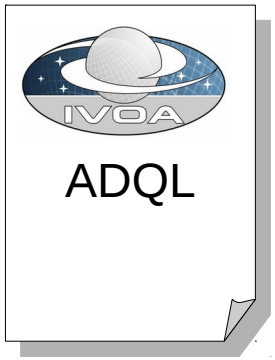


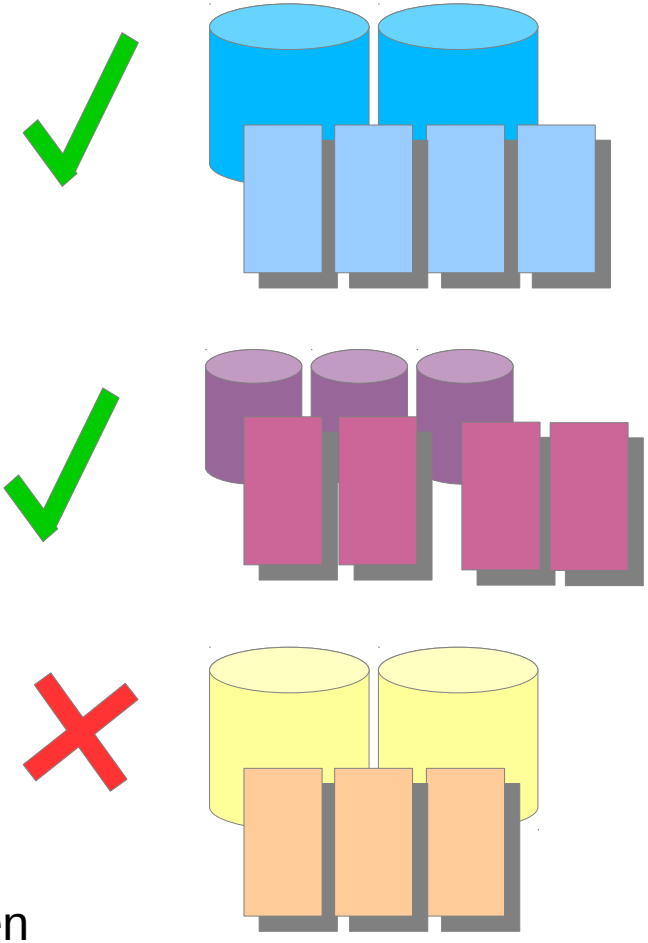
```
SELECT
      ….
FROM
      ….
WHERE
      ….
OFFSET n
```

Sometimes
the complicated ones are easy,
and sometimes
the simple ones are hard.

D.Morris
Institute for Astronomy,
Edinburgh University
June 2016

Consensus and
updated specification





```
SELECT
      ….
FROM
      ….
WHERE
      ….
OFFSET n
```

Balance between
complexity of optional features
vs
excluding implementations

Oracle does not support OFFSET

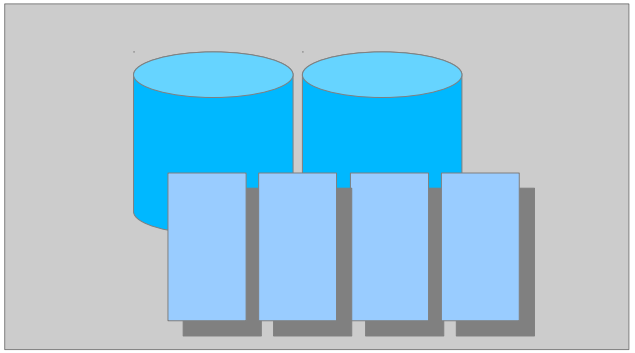
Cosmopterix

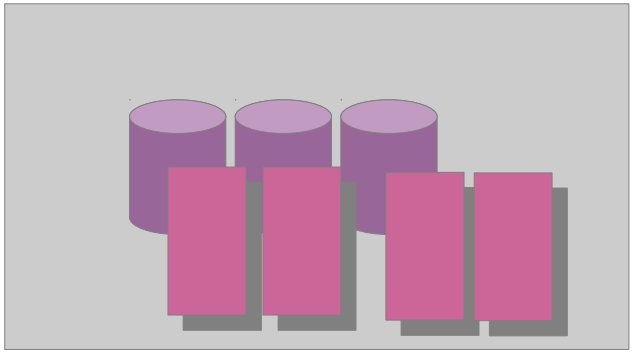
Docker containers, providing basic install of each database platform.

A simple platform for experimenting with ADQL syntax.



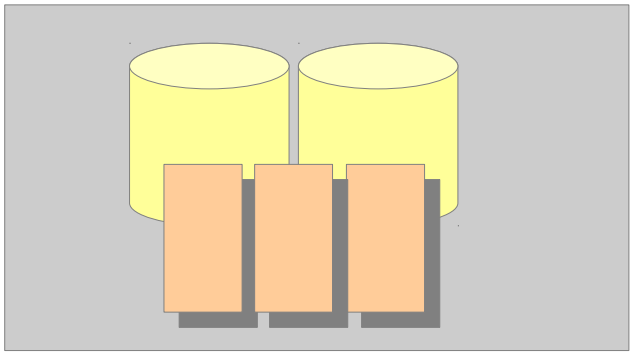
Working

- PostgreSQL
- MySQL
- MariaDB
- HSQLDB
- Apache Derby
- Oracle (*)



Future

- H2
- SQLite
- SQLServer
- Qserv
- SpiderEngine
- Hadoop



GitHub project
- contributions welcome

https://github.com/ivoa/cosmopterix

Lyonetia

Initially, somewhere for us to collect example ADQL queries.

Initial goals
- Provide source material for ADQL parser tests
- Provide source material for ADQL query tests

Medium term goals
- Provide reference material for science use cases

Long term goal
- Future work on validating the BNF grammar

GitHub project
- contributions welcome

https://github.com/ivoa/lyonetia
