Publishing our data into the cloud

Access to other people's data from the cloud

[our data] + [their data] => [interesting stuff]

Successes:

- Atlas OSA ADQL queries - in place and working
- Test connection to external VO data :-)

Opportunities:

- Influence the VO and IVOA standards (no one else has done this yet)

Failures:

- Problems with testing SQL/ADQL compliance
- Limited progress on VO side of the project

Threats:

- Verifying full ADQL/SQL correctness is open ended
- Two different projects with different priorities
